

Online survey for questionnaire evaluation!

We are currently running an online survey to evaluate a questionnaire that measures the music listening abilities, attitudes towards music and musical activities of adult cochlear implant (CI) users. It will be used to assess the effects of music rehabilitation and implant technologies on the music experiences of CI users.

We are looking for professionals with experience in working with CI users and/or good knowledge of the challenges of CI users with music.

You will be asked to: a) assign each questionnaire item into a domain and b) comment on the format and the content of each item. The survey is expected to be maximum an hour long.

The survey will be online until the 31st May 2015 and can be accessed from any computer, tablet or mobile phone.

As a reward for your participation, you will have a chance to win one of three Amazon vouchers each worth £20!

If you would like to take part or if you have any questions please contact:
