

Online Music Survey for Cochlear Implant Users

We are running an online survey on groove perception at the Center for Music in the Brain, Aarhus University. It would be greatly appreciated if you would be part of it.

It takes around 15 minutes, and it is very simple: listen to some drumbeats and rate how much pleasure you experience and how much it makes you want to move – no right or wrong answers!

You must be above 18 years of age, use a cochlear implant, have no neurological or psychiatric disorder, and understand English. The survey is anonymous.

Just follow the link!
